

Overview of Services:

Decision Support Systems

The DataTech Difference

Since 1998, **The DataTech Group** has been providing successful Decision Support System solutions for both the public and private sector. We understand the importance of efficient IT solutions deployment and its impact on your businesses agility, responsiveness, and consistency. **Our emphasis on providing solutions with you in mind sets us apart from our competitors and ensures the personal attention your project deserves.**

Technologies change. Organizations change. Information changes, but your need to make informed decisions does not. We meet this need with solutions that adapt and anticipate alternative technologies, user needs, and better information.

With success deploying departmental data marts and multi-billion row active data warehouse solutions, we have the government and private sector expertise your organization needs.

Not only does our data warehouse experience date back to the 1980's, but our founders helped pioneer RAID technology—the most widely used disk sub-system. Quite simply, we create adaptable, reliable decision support solutions.

**Confused?
We've Got Answers.**

“[Your new billing system] brought information together that I found very difficult to put together from our regular reports. I wish that I had been using [your system] last summer.”

— U.S. Department of Defense Manager

DataTech Decision Support System Benefits

- Make swift decisions with a reliable, single-view of your business.
- Common interface for data gathering and analysis.
- Cross reference data from multiple sources.
- Streamline employee access to information.
- Improve productivity and efficiency.

Success Story

Utilizing a telecommunications billing system designed in the 1970's the Defense Information Technology Contracting Office (DITCO) needed an improved process to accurately project telecommunications costs and revenues for program management, financial reporting, rate development, and budget development for both internal and external customers.

We succeeded in improving a system that was complex and fragmented. Integrating old data with a new design, we created the efficiency and clarity required of a new billing system. In fact, this system's popularity has grown and is now widely used among many Federal agencies including DOD.
