

## Overview of Services:

# Enterprise Architecture

## The DataTech Difference

Since 1998, **The DataTech Group** has been providing successful Enterprise Architecture solutions for both the public and private sector. We understand the importance of efficient IT solutions deployment and its impact on your businesses' agility, responsiveness, and consistency. Our emphasis on providing solutions with you in mind sets us apart from our competitors and ensures the personal attention your project deserves.

Today, businesses must have a well-designed architecture to achieve their business goals. Our unique holistic emphasis on technical and social requirements enables us to create the best possible framework. At The DataTech Group, we have the foresight and expertise to enable you to seamlessly integrate Business, Systems, Information, and Technology domains into a single, valuable framework—Your Enterprise Architecture.

## The Social Difference

An Enterprise Architecture is a fully integrated collection of models and documents clearly defining the relationship between the four key architectural domains. These models and documents are developed with CASE tools that use standard methodologies.

**“Our unique emphasis on technical and social requirements enables us to create the best possible framework.”**

While every methodology has strengths, they are only tools. Unfortunately, methodologies typically overlook the social engineering aspects of enterprise development. **We understand that your business is comprised of people, and your success depends on their ability to effectively use the architecture.** That is why we place equal focus on the social environment of your enterprise.

## DataTech EA Benefits

- A unique understanding of your social and technical environment.
- An architectural framework that is adaptable to changing technologies and user expectations.
- Streamlined business processes and improved information flow.
- Valuable intellectual property through detailed information models and documentation.

## EA Experience

The DataTech Group is working with UNISYS on the United States Department of Defense enterprise architecture to enable effortless browsing and support for architectural analysis at all levels for transition planning and system compliance.

Our mission is to develop, configure, customize, and integrate the DOD architecture demonstration in support of the Defense Enterprise Accounting and Management System (DEAMS).
