

Overview of Services:

Information Security

The DataTech Difference

Since 1998, **The DataTech Group** has been providing successful Information Security solutions for both the public and private sector. We understand the importance of efficient IT solutions deployment and its impact on your businesses agility, responsiveness, and consistency. Our emphasis on providing solutions with you in mind sets us apart from our competitors and ensures the personal attention your project deserves.

An Inside-Out Approach

In today's environment, solid information security is an absolute necessity. Unfortunately, many IT providers approach this issue from an insular point of view, believing that protection from outside sources is enough.

At The DataTech Group, we know that an organization is only as secure as its weakest link— its people. Just like our Enterprise Architecture solutions, we employ a social and technical approach to Information Security.

We know that an organization is not defined by its processes. It is defined by its people. Our inside-out approach emphasizes a solid de-
